

The following section provides a brief description of each script included in the repository, outlining its role within the application and its contribution to the functionality.

-PosicionInicial: it goes to scene 1 through a system similar to the scene change one, only this one is controlled by time, when the selected number of seconds passes, it changes.

-GuardadoTiempo: code that makes it possible to save the time by allowing the system to persist between scenes, so it has to go on an empty object.

-PasoAEscenaTres: adjusts the position of the player to avoid errors.

-CambioDeEscenaPorTrigger: make a scene change in scene 1, when the cubes touch and move to scene 2.

-CambioDeEscenaPorTrigger2: make a scene change in scene 2, when the cubes touch and move to scene 3.

-CambioDeEscenaPorTrigger3: make a scene change in scene 3, when the cubes touch and move to scene 4.

-CambioDeEscenaPorTrigger4: make a scene change in scene 4, when the cubes touch and move to scene 5.

-CambioDeEscenaPorTrigger5: make a scene change in scene 5, when the cubes touch and move to scene 6.

-CambioDeEscenaPorTrigger6: make a scene change in scene 6, when the cubes touch and move to scene 7.

-CambioDeEscenaPorTrigger7: make a scene change in scene 7, when the cubes touch and move to NewFinalScene.

-Crono: creates the behavior of the stopwatch with which the time will be measured.

-MostrarTiempos: shows the stored times.

-PasoAEscenaSeis: it goes to the credits scene through a system similar to the scene change one, only this one is controlled by time, when the selected number of seconds passes, it changes.

-PasoAEscenaDos: it exits the application using a system similar to scene switching, except this one is time-controlled; when the selected number of seconds passes, it closes.
